

AB33 - Alaska

Coldfoot <300m

P360 - Idaho

Island Park <12.5 km

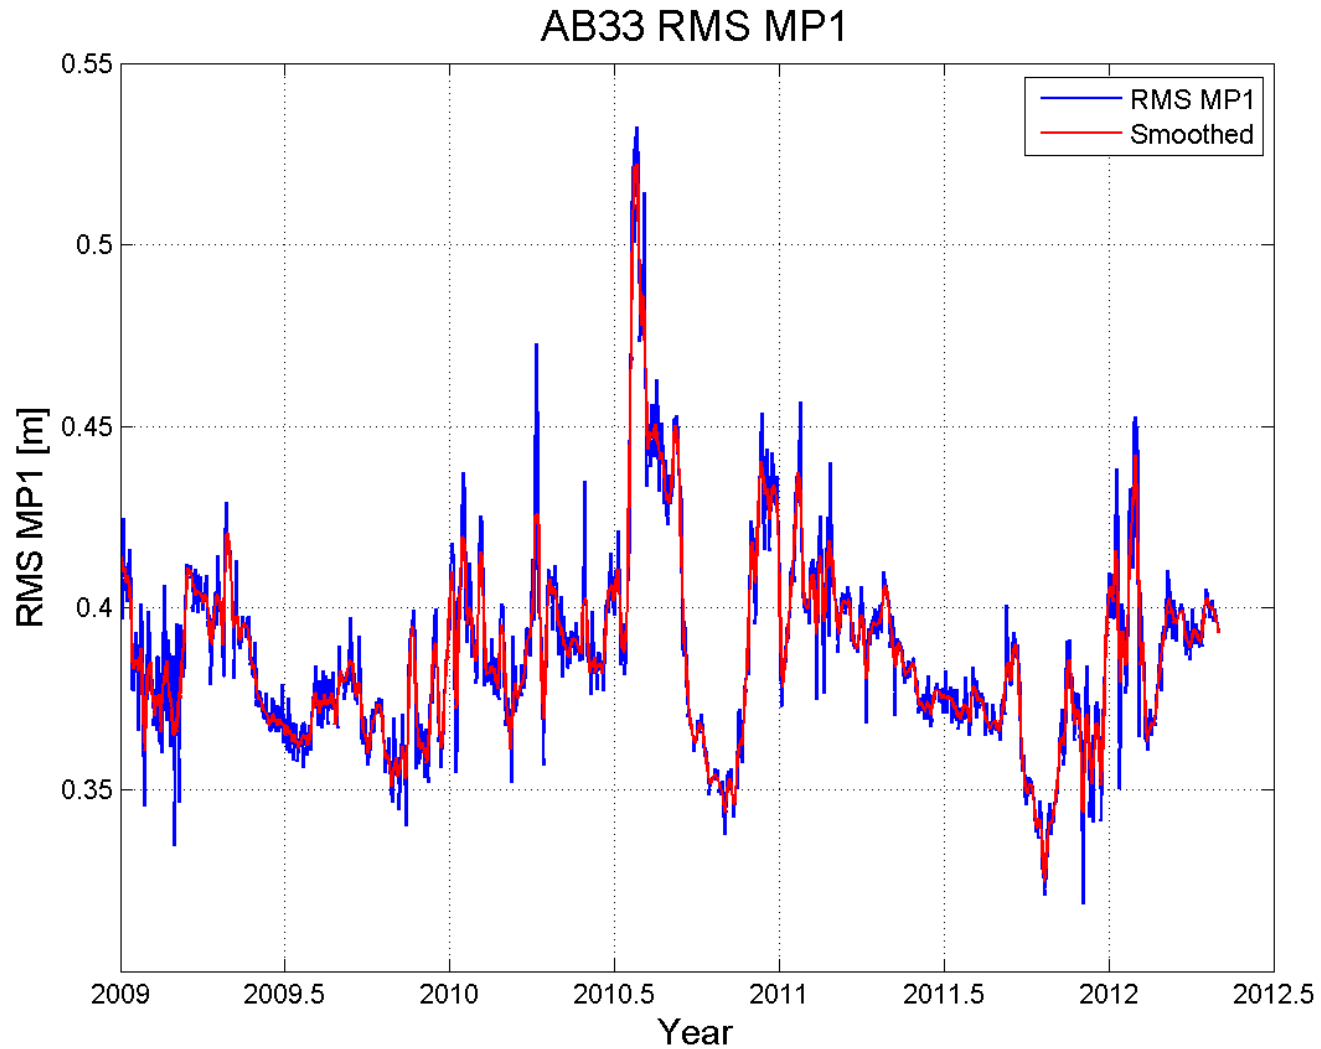

P455 - Idaho

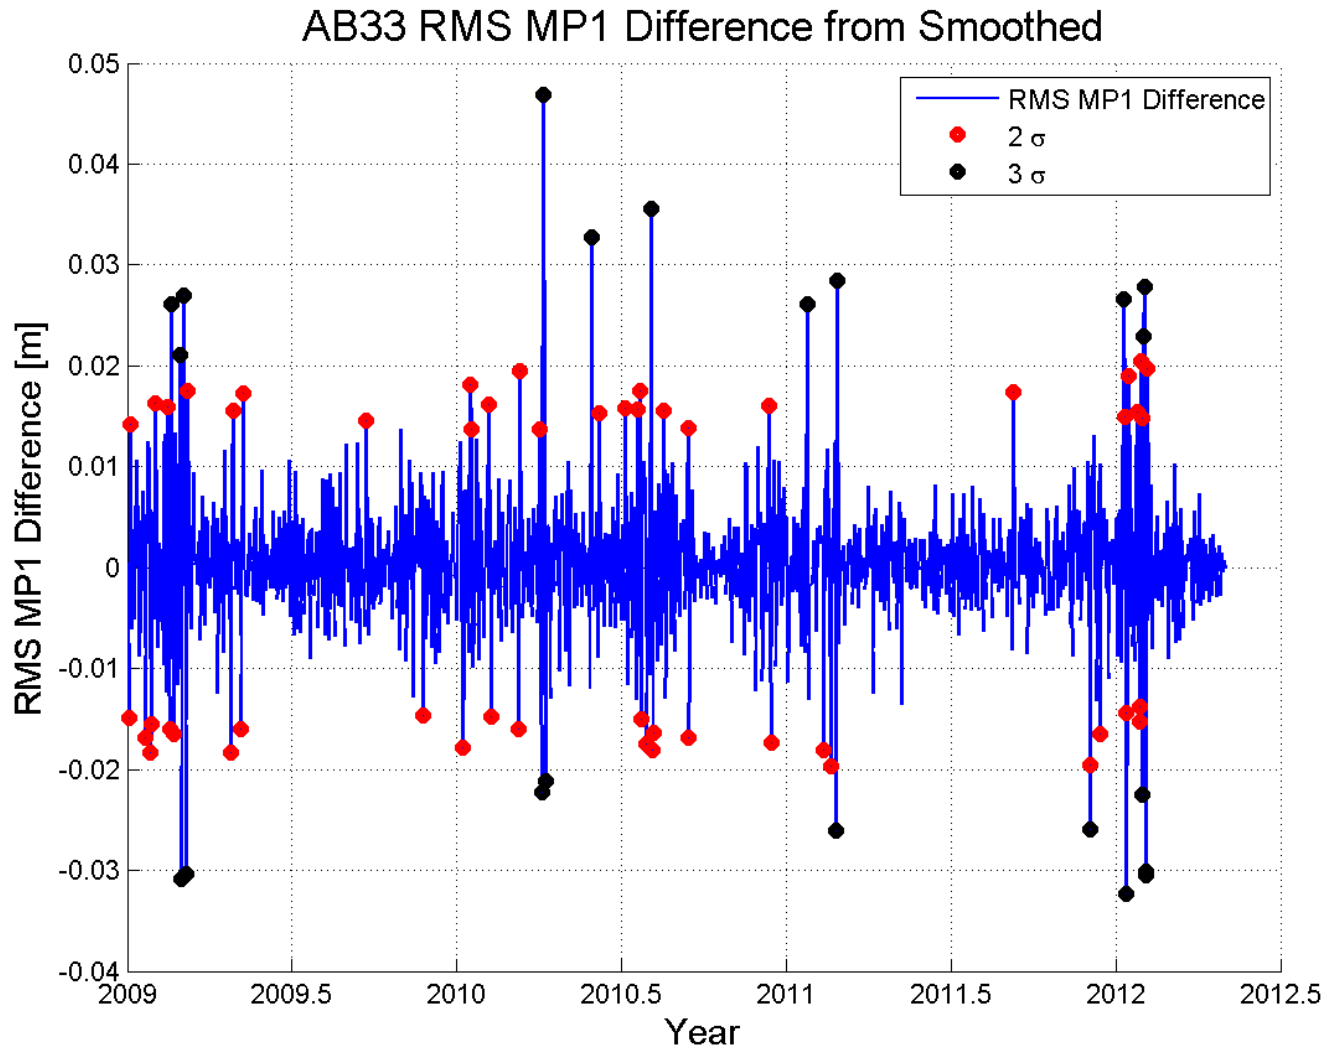

Beagle Springs <19.2 km

AB33 RMS MP1

AB33 MP1 Difference

AB33 Snow Depth

AB33 Outliers and Snow Depth

AB33 Summary

- 16/21 3σ values Correspond to falling or recently fallen snow
 - 13 within 1 day of a major snowfall
 - 5 During the Summer
- 2σ has many more correlations
- Not all snowfalls recorded however

P360 RMS MP1

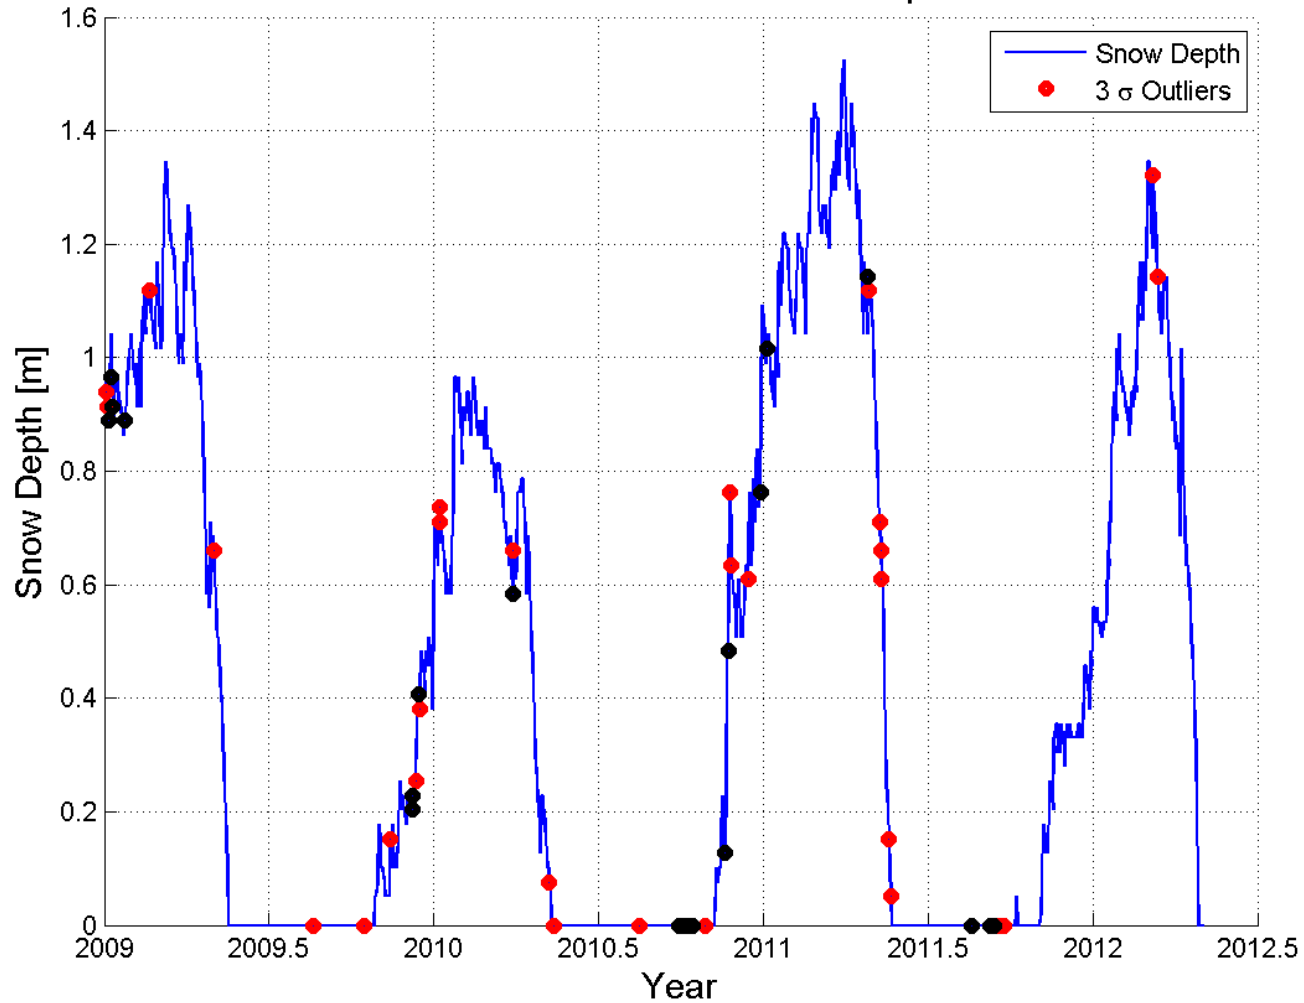

P360 MP1 Difference

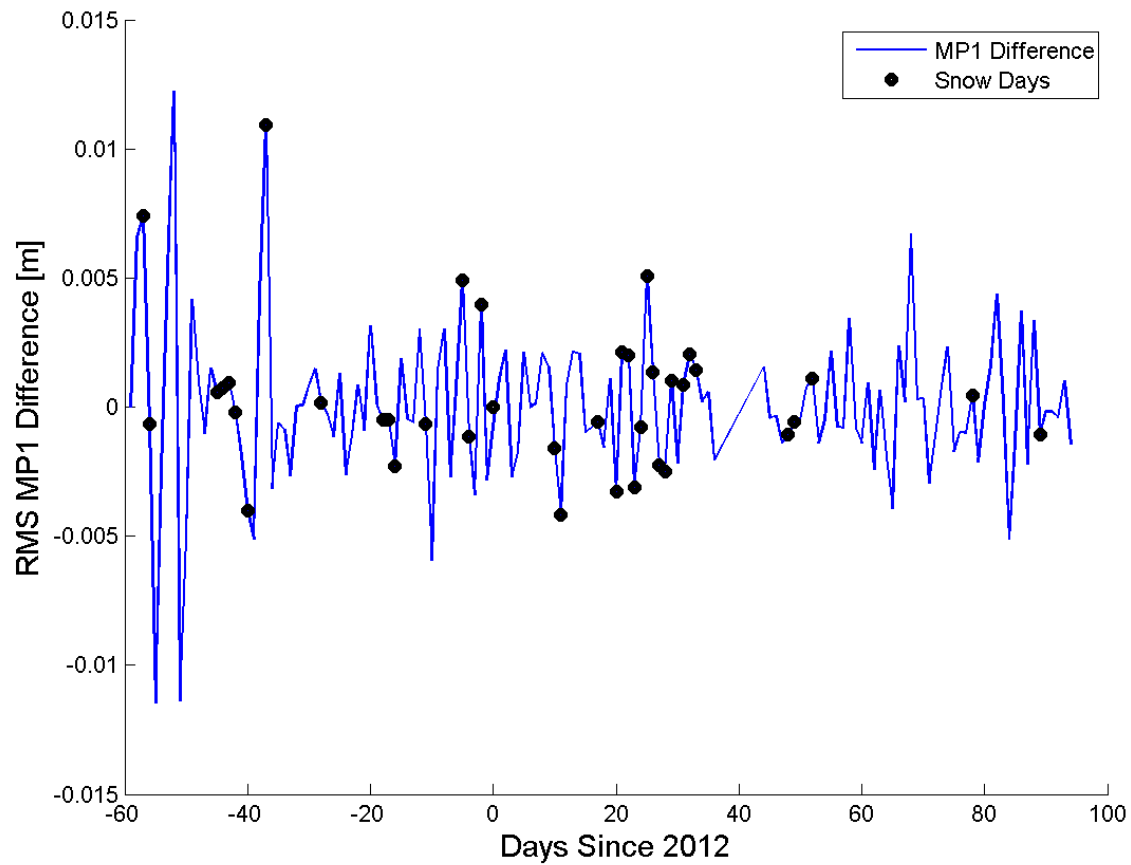

P360 Snow Depth

P360 Outliers and Snow Depth

P360 Truth Measure

P360 Summary

- Less matching than AB33 showed
- Does not always show days with snow on antenna
- Better outlier finding could help

P455 RMS MP1

P455 MP1 Difference

P455 Snow Depth

P455 Outliers and Snow Depth

RMS MP1 Difference Summary

- Could be used to remove some “very bad” data sets
- Seems to be more coincidental than anything
- Not reliable to detect all days with snow on the antenna however.
